WOODY
LOG
LOADERS

The Woody Log Loaders Intermediate series are designed for compact tractors of 35 hp to 65 hp. In this series, you will find the Low Profile model specifically designed to work in the sugar bush. Its lowered boom and lowered trailer features allow it to pass under the tubes making it an essential tool for maple producers.

equipementswoody.com

The 115-HD Woody Log Loader is part of the Intermediate series. Primarily designed for tractors from 30 hp to 70 hp, but can easily adapt to 50 hp to 70 hp tractors if work sites are in areas such as mountainsides with steep slopes. Lightweight, but also as well equipped as the larger industrial models, the 115-HD Log Loader is an excellent compromise between the Compact series and the Industrial series.

It is mounted on a 10-66 HV trailer.

The 125-LP Low Profile Woody Log Loader was specifically designed with maple producers in mind. Its low profile boom and lowered trailer allow it to easily pass under the tubes making it very convenient when working in the sugar bush.

The loader is mounted on a Low Profile 10-66 LP trailer.
