Single Shank Deep Tillage Ripper

Features

- Heavy construction for long life
- For both Cat. I and Cat. II tractors
- Replaceable wear strip
- Reversible point made from long wearing hi-carbon steel
- Easily replaceable shear pin to protect unit and tractor
- Large 30" shank for deep soil penetration (up to 24" working depth)
- Can be used as a hedgerow root plow to increase crop yields

Model R-130

- A** Illustration A is an example of what happens when plow sole, hardpan, and wheel compaction reduces the soil's capacity to store moisture. Roots cannot penetrate the compacted soil! Lack of moisture retards root development! Plants with poor root development have no stamina!
- B** Illustration B shows the deep penetrating action of the **SINGLE SHANK RIPPER** as it shatters the hard soil. The opening of this soil allows the entrance of air and mulch which absorbs and holds moisture and nutrients.
- C** Illustration C shows the natural root development which is normal after use of the **SINGLE SHANK RIPPER**. No matter how hard your soil may be, sub-soiling can convert your field into a life giving reservoir. Your crops will be provided with a proper balance of air, moisture and nutrients. Your yield will increase! Profits will increase!

NOTE – The Worksaver Single Shank Ripper can also be used as a root plow. Hedgerow roots will take moisture from cropland and can reduce yields 50-75 feet out from the hedgerow. With the Worksaver R-130 you can cut these roots, increase yields, and leave the hedgerows intact. It is recommended to stay 15-20 feet out from the tree trunks. Make two trips – one at 12-15 inches and the second at 20 inches. Be careful to avoid buried powerlines, pipelines, or cables.

Model	No.	Description	Wt.
R-130	800120	3 Pt. Single Shank Ripper Cat. I & Cat. II – 30" ripper shank (31" frame)	218
