

The Delta Flexible Harrow

- Turf management
- Graveled or dirt roadway maintenance
- Pasture management
- Forage crop improvement
- Arena resurfacing
- Seedbed preparation
- Corn stalk levelling

A group of companies focused on distinctive solutions for the farm equipment industry.

S3enterprises.com

The Delta Flexible Harrow is the most effective inexpensive tool for terrain grooming and pasture management.

Tyne positions for every application.

Heavy Action
Tynes stand at an aggressive 75° angle.

Medium Action
Reversed, tynes have a lighter angle of action.

Light Action
Turned over, resulting in a finer leveling effect.

Dual Action
Front section heavy action, rear section levels.

Delta attachments are designed for user customization.

While tillage equipment options available today become increasingly complex, the Delta Flexible Harrow remains an easy-to-use, effective, inexpensive multi-use tool for a very wide array of terrain management chores.

Rugged drawbars drag tyne sections while 3-point lifts and heavy-duty carts allow for ease of transportation and wide coverage. The modular, multi-use design and wide range of attachment options places the Delta Flexible Harrow in several markets in which minimum tillage solutions are a must.

Delta harrow sections are assembled using cold-formed tynes from 7/16, 1/2, and 5/8" diameter steel wire, in modular units suited to configure with Delta attachments. Drawbars and 3-Points range in widths from 4 to 14'; Carts are available in widths from 16 to 42'.

Typical applications, unlimited flexibility.

The Delta Harrow has been designed with flexibility that allows for a broad range of applications. Here are a few in which it excels:

Turf Management: Unmanaged turf becomes heavily thatched and compacted, preventing healthy growth from reaching its full potential. The Delta Flexible Harrow stimulates growth by surfacing the dead material, aerating the soil, and strengthening the grasses. A small section on a drawbar or 3-point is all you need to tow behind your yard vehicle.

Gravelled or dirt roadway maintenance: Gravel roads or dirt paths are quickly smoothed, levelled, dried and manicured. Hook a small drawbar and section up to your quad, or a 3-point hitch attachment to your garden tractor to make a quick job of driveway maintenance.

Pasture management: Solid or liquid manure makes the surrounding grass unpalatable for livestock. Treatment with the Delta Flexible Harrow maximizes the fertilizer benefits of existing droppings by encouraging decomposition, spreading nutrients, incorporating moisture, uncovering growth and aerating the soil. For this job, you will want to choose a combination that fits your pasture and moving distance.

Forage crop improvement: Studies prove that mechanically stimulating forage land is the most

cost-effective method of dramatically improving the hardness and productivity of the plant. Scratching the soil surface covers open seed, assisting in germination and the establishment of new plants. Stimulating and spreading the dead thatch aids decomposition, and increases the speed at which nutrients are usable. And while you're providing all that with your Delta harrow, you will be levelling rodent mounds. The Delta Harrow Cart is the premium choice in this application.

Arena resurfacing: Arenas or playing fields become smooth and loosely packed: a safe surface for all activities. Any size that fits through your gate will get the work done quickly.

Seedbed preparation: The modular design of the tyne sections and range of attachment widths available make it easy to combine with field cultivators or other implements to prepare a firm, level seed-bed or to pack and cover.

Corn stalk levelling & Minimum/No-Till Practices: Break up crust, ridges or stalks to clean up after harvest and prep for the next season. Heavy residue like corn stalks is levelled and distributed without clumping or bunching – even in extreme situations. The Delta Cart is ideally suited to cover your field as quickly as possible, and provide unequalled durability so that you can keep going.

Flexible Two-Way design for optimum debris clearance.

Delta Cart Features

- Two-way flexible tynes, cold-formed and built to last. Our 5" of tyne means more tyne for your money. Choose from 7/16", 1/2", and heavy duty 5/8"!
- Our cart frames use a sleeve and bolt through mounting design for strength and are powder coated for durability.
- Designed to handle rough terrain, 15" tires with extra long bolt-through spindle and reinforced axle.
- Hydraulic cylinder mount is made from 1" solid steel, maximizing flotation and durability.
- Top mounted lift cylinder enhances flotation and longevity.
- Extra long hitch tongue for sharp turning when paired with other equipment.
- Heavy duty cast hitch, 2000 lb. jack, safety chain – standard equipment.
