

Always have hay available for your horses.

Horses evolved to eat small amounts of forage continuously throughout the day and night. How can we feed our domesticated horses the way nature intended?

Offering free-choice hay can lead to over eating. And hay that's fed on the ground can be soiled and wasted.

Slow feed netting is proven to manage the consumption of hay. But filling hay bags every day takes a lot of time. And horses often hold their heads in unnatural positions while they're eating from a bag.

The OptiMizer combines the best of slow feed netting with the convenience of a multi-bale feeder.

Our research shows that the OptiMizer results in natural forage behaviours. Hay consumption is regulated and horses are content.

With an OptiMizer, you can rest assured that you are providing your horses' hay in a natural and healthy way.

Available Spring 2023 OptiMizer InStall

The OptiMizer InStall holds enough hay for the night (up to 25 pounds).

Slow feeding has never been this quick.

OptiMizer®

The healthy hay feeding system

**Slow, Natural Grazing ...
Keeps Hay Clean
Reduces Waste
Saves Time**

Optimize Feeding Hay

For your horses...

- Clean hay is always available
- Eating is slow and relaxed
- Head is down in a natural position
- A safe herd environment is created

And for you...

- Easy and fast to refill
- Hay consumption is controlled
- Hay is not soiled or wasted
- Peace of mind—your horses have hay

So nice, we bought it twice!

With the money that we saved on our first purchase, we purchased a second feeder a year later. We monitored the wasted hay from ground feeding, hay huts and the OptiMizer. Hands down the OptiMizer saved us money compared to the other two hay feed methods. Very little wasted hay on the ground, to be slept, peed, and pooped on! Or pushed into the mud. The original feeder has been pushed to the limits and still works great and looks like new. Great safe design, all horses can reach and feed safely. This feeder keeps horses busy slow feeding, all maintain healthy weight and condition on the slow feeder and the feeder is easy to move if needed.

If you are looking for a safe and reliable hay feeding solution, that will save you money, the OptiMizer is the one for you.

About the OptiMizer

The OptiMizer holds two small square bales of hay (2-string) or up to 150 pounds of flakes from a 3-string or large square.

The manger is made of the same polymer used to make playground equipment. All the corners are rounded or bevelled for safety. There are 13 drainage holes so rainwater will not collect in the bottom.

OptiNet knotless netting is proven to be durable yet gentle for feeding horses. The netting drapes over the hay as it is consumed slowly through the openings. The netting is mounted on a stainless steel assembly that quickly slides open to refill hay.

The OptiMizer measures 4' by 4' square and weighs about 100 pounds. Handholds make it easy to pull or carry. It is available in 3 heights (34", 27", 22") and with a choice of netting (1.25", 1.6", 2.5") to meet the needs of your horses.

The OptiMizer is an investment that pays for itself in hay savings.
