10-102921	14 ft Lift only (add 2-4HS, 1-6HS)	205	1,160.00

Delta harrow sections have a **5" tooth for longer life** at the main wear point. The steel used has 100% Tensile strength = (measures the force required to pull something such as a rope, wire or a structural beam to the point where it breaks. The Yield Point is 90% to 100% = (The stress at which a material begins to plastically deform. Once the yield point is passed some of the fraction of the deformation will be permanent and non-reversible).

Printed price sheets are for spec reference only. **VERIFY ALL PRICES** at www.jswoodhouse.com or call for price.
